Biochemistry 38:6479-6488(1999).
-!- FUNCTION: AN ADHESIVE ROLE BY INTEGRATING COLLAGEN BUNDLES. IT I PROBABLY ASSOCIATED WITH THE SURFACE OF INTERSTITIAL COLLAGEN FIBRILS VIA COLI. THE COL2 DOMAIN MAY THEN SERVE AS A RIGID ARM WHICH STICKS OUT FROM THE FIBRIL AND PROTRUDES THE LARGE N-TERMINAL GLOBULAR DOMAIN INTO THE EXTRACELLULAR SPACE, WHERE IT MIGHT INTERACT WITH OTHER MATRIX MOLECULES OR CELL SURFACE RECEPTORS.
                                                                                                                                                                                                                                                                                                                                      Waelchii C., Trueb J., Ressler B., Winterhalter K.H., Trueb B.; "Complete primary structure of chicken collagen XIV."; Eur. N.Alternate names: C3 convertase; C3 proactivator; glycine-rich beta-glycoprotein; heat-
N.Contains: alternative-complement-pathway C3/C5 convertase (EC 3.4.21.47) Bb fragment
C;Species: Homo sapiens (man)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           kinesin-like protein [imported] - fission yeast (Schizosaccharomyces pombe)

A;Note: the list of introns may be incomplete
A;Note: gene is located in the major histocompatibility complex, class III region
C;Complex: complement factor B initially forms an inactive complex with complement factor
ment factor C3b forming active C3/C5 convertase; Ba is released

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, the encoded polypeptides are useful immunosuppressant and cytostatic activity. The polynucleotides are useful immunosuppressant and cytostation containing a polypeptide or polynucleotide in gene therapy. A composition containing a polypeptide or polynucleotide or polynucleotide in gene therapy. A composition containing a polypeptide or polynucleotide of of the invention may be used to treat diseases of the peripheral nervous contains and neuropathy and central nervous system diseases, such as localised neuropathies and central nervous system diseases, and stripping a local stripping and syndrome. Other uses include the attain activity, nemotatic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and contain and activity arthritis and inflammation, leukaemias and activity and processes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence data for this patent did not form part of the printed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel nucleic acid sequences encoding TANGO-128, 140, 197, 212, 213, 224 and 239 polypeptides useful for the treatment of asthma, rheumatoid arthritis, psoriasis and autoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acids encoding TANGO polypeptides are useful as modulating agents for regulating cellular processes like asthma, graft versus-host diseases, rheumatoid arthritis, poscriasis, inflammatory bowel disease, septic shock, ulcerative colitis, Crohn's disease, chronic myelogenous leukemia, cancer, liver disease, Hodgkin's chisease, osteoarthritis, Lyme's disease, cachexia and autoimmune diseases e.g. myasthemia gravis, autoimmune diabetes and systemic lupus erythematosus. The nucleic acids are also useful for producing transgenic animals and the TANGO polypeptides themselves. Partial C TANGO-128, 140, 197, 213, 214, 239 sequences are useful in forensic biology, for diagnostic assays, prognostic assays, prognostic assays, paramacogenomics and for monitoring clinical trials. TANGO polypeptides are suitable for both prophylactic and therapeutic methods for treating a subject at risk of a disorder or having a clisorder associated with aberrant TANGO expression. A wide range of cellular disorders can be treated.
                                                                                                TANGO; 128; 140; 197; 212; 213; 224; 239; modulating agent; asthma; graft versus-host diseases; rheumatoid arthritis; psoriasis; inflammatory bowel disease; Septic Shock; ulcerative colitis; Crohn's disease; chronic myelogenous leukemia; cancer; liver disease; Hodgkin's disease; osteoarthritis; Lyme's disease; cachexia; autoimmune disease; myasthemia gravis; autoimmune diabetes; systemic lupus erythematosus; transgenic animal; diagnosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   200 pvndgfqalqqilhsilkkscieilaaepsticagesfqvvrgngfrharnvdrvlcsf 259

AAD05300-AAD05379 represent cDNAs corresponding to 28 human secreted protein genes, and AAE01436-AAE01513 represent the proteins they encode. AAE01514-AAE01544 represent human secreted protein fragments or variants. The genes and their secreted proteins are useful for preventing. The genes and their secreted proteins are useful for preventing. The genes and their secreted proteins are useful for preventing. The genes and their secreted proteins are useful for preventing. The genes and their secreted protein or gene therapy. Pathological conditions can be diagnosed by determining the presence of mutations in the new genes. Specific uses are described for each of the mutations in the new genes. Specific uses are described for each of the control of the developing products for the diagnosis or treatment of proliferative disorders, cancer, thumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, allergies, neurological disorders (e.g., Alzheimer's disease, Parkinson's disease), cognitive disorders, schizophrenia, asthma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; secreted protein; proliferative disorder; cancer; tumour; foetal abnormality; developmental abnormality; haematopoletic disorder; immune system disorder; AlDS; autoimmune disease; rheumatoid arthritis; inflammation; allergy; neurological disorder; Alzheimer; sdisease; Parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; anglogenic disorder; kidney disorder; endocrine disorder; pregnancy-related disorder; endocrine disorder; infection; wound healing; vulnerary; cell culture; chemotaxis; food additive; gene therapy; binding partner identification; chromosome 19.

skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, angiogenic disorders, kidney disorders, cardiovascular disorders, pregnancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound classorders, and infections. The proteins can also be used to aid wound calling and epithelial cell proliferation, to prevent skin aging due to submurn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their compate ligands or binding partners, and in chemotaxis, and can be used in a set food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunossays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                   ;

AAD05300-AAD05379 represent CDNAs corresponding to 28 human secreted protein genes, and AAE01446-AAE01513 represent the proteins they encode. CC AAE01544 represent human secreted protein fragments or variants. CAAE01544 represent human secreted protein fragments or variants. The genes and their secreted proteins are useful for preventing, creating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the cannot of the new protein in a sample or by determining the presence of amount of the new protein in a sample or by determining the presence of amount of the new genes. Specific uses are described for each of the immunity of the interpretative disorders, cancer, tumours, foetal and developmental products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental continued disorders, diseases of the immune system, allerative disorders, conditive disorders, schizophrenia, asthma, callerative disorders, conditive disorders, schizophrenia, asthma, cardiovascular disorders, pregnancy-related disorders, earlierative disorders, pregnancy-related disorders, endicated disorders, maninear disorders, pregnancy-related disorders, endicated disorders, and infections. The proteins can also be used to aid wound disorders, and infections. The proteins can also be used to aid wound conture of primary tissues, to regenerate tissues, to identify their culture of primary tissues, to regenerate tissues, to identify their culture of primary tissues, to regenerate tissues, and can be used on a a food additive or preservative to modify storage properties.

Calleviating symptoms associated with the disorders mentioned above, and immunosorbent assay (ELISA). The present sequence represents a human immunosorbent assay (ELISA). The present sequence represents a human immunosorbent assay (ELISA). The present sequence represents a human immunosorbent assay (ELISA).
                                                                                                                                                                                                                                                                                                                                                                                                                                                     New nucleic acid molecules encoding 28 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RTASVIJALTDGELHEDLEFYSERBANKSRDLGAIVYCVGVKDFNETGLARIADSKDHVF 120

The present sequence represents a human TANGO 216 polypeptide. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. THE TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any won Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular interactions, modulate cell adhesion in proliferation, modulate cellular interactions, modulate the proliferation, differentiation, differentiation, differentiation, differentiation, differentiation, differentiation, differentiation, differentiation and bronchies, solen associated diseases, modulate renal disorders, treat cardiovascular disorders such as ischemic heart disorders, treat cardiovascular disorders such as ischemic heart disorders, treat cardiovascular disorders such as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the covaries, cerebral ocedema, hydrocephalus, brain herniations, latrogenic disease, inflammations, becterial and viral meningitis, latrogenic disease, cerebral toxoplasmosis, Parkinson's disease, multiple sclerosis, disorders, hydrocephalus and encephalitis, and treat hepatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TANGO 266; TANGO 216;; TANGO 261; TANGO 267; cellular proliferation; cellular adhesion; cellular proliferation; cellular differentiation; cellular adhesion; von Willebrand factor-associated disorder; cell trafficking; cancer; hematopoietic associated disease; atlectasis; pulmonary congestion; oedema; emphysema; chronic bronchitis; bronchial asthma; bronchiacistinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; brain herniation; iatrogenic disease; inflammation; meningitis; Alzheimer's Disease; cerebral toxoplasmosis; Parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder.

```
AAB18455-57 represent human TANGO 216 proteins. The specification also describes TANGO 266, TANGO 267, and TANGO 267. The TANGO CC describes TANGO 266, TANGO 267, and TANGO 267. The TANGO CC CO describes TANGO 266, TANGO 267, and TANGO 267. The TANGO CC pollypeptides can be used to medulate cellular adhesion. The cellular differentiation and/or modulate cellular adhesion. The cord of disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, compute cell adhesion in proliferative disorders, such as cancer, and the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, and hematopoietic associated diseases and disorders, spheen associated accent and hematopoietic associated diseases and disorders, spheen associated diseases, modulate renal disorders, treat cardiovascular disorders associated diseases, modulate renal disorders, treat cardiovascular disease, modulate renal disorders, and cerebral oedema, hydrocephalus, brain herniations, introgenic disease, inflammations, cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to treat disorders associated disease, introgenic disease, inflammations, brain menigitis, alzheimer's Disease, crebral carecrs, toxocophalus, brain menigitis, alzheimer's Disease, crebral carecrs, receptance disease, intrammations, introgenic disease, inflammations, hydrocephalus and encephalitis, and treat hepatic disorders.

AAB18455-57 represent human TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO CC describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO CC polypeptides can be used to modulate cellular adhesion. The cellular differentiation and/or modulate cellular adhesion. The disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, and cell trafficking and/or migration, modulate cellular interactions, cc modulate the proliferation, differentiation, and/or function of cells cand hematopoletic associated diseases and disorders, atelectasis, pulmonary congestion or oedema, emphysema, chronic bronchitis, bronchial sthma and bronchiectasis, intestinal disorders, splean associated asthma and bronchiectasis, intestinal disorders, splean associated as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated with the ovaries, and cerebral oedema, hydrocephalus, brain herniations, iatrogenic disease, inflammations, iatrogenic disease, inflammations, iatrogenic disease, inflammations, hydrocephalus and encephalitis, and treat hepatic disorders.

Croxoplasmosls, parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders:

Croxoplasmosls, parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders:

Creat disorders associated with the specification; it was note: the present sequence does not appear in the specification; it was one created using information provided.

be administered to treat diseases by gene therapy. Antisense molecules may be administered to treat diseases by gene therapy. Antisense molecules may be administered to down regulate expression of SPs by binding with the cells own genes and preventing their expression. The polynucleotides may also be used as DNA probes in diagnostic assays. The SPs may also be used as antigens to produce antibodies and to identify modulators (agonists and antagonists) of the SPs. The anti-(SP) antibodies and antagonists may also be used to down regulate expression and activity of antagonists may also be used to down regulate expression and activity of SPs and as diagnostic agents for detecting the presence of SPs in samples. The disorders include for example: immune/autoimmune diseases (e.g. HIV (human immunodeficiency virus) infections, anaemia, rheumatoid arthritis and multiple sclerosis), cancers and hyperproliferative disorders (e.g. melanomas, neoplasms of the breast or liver, Sezary syndrome and Gaucher's disease), neurological diseases (e.g. Alzheimer's disease, Parkinson's disease) neurological diseases (e.g. Alzheimer's disease, arrest, tachycardia and angina), infections caused by bacteria, viruses and fungi and coular disorders (e.g. corneal infections). Other uses include wound healing, maintenance of organs before transplantation,

disorders, atclectasis, pulmonary congestion or oedema, emphysema chronic bronchitis, bronchial asthma and bronchicetasis, intestinal disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, crebral oedema, hydrocephalus, brain herniations, latrogenic disease, inflammations, bacterial and viral meningitis, Alzheimer's Disease, cerebral toxoplasmosis, Parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence represents a murine TANGO 216 polypeptide. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO DOLYPEPLIDES can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferative disorders, such as cancer, modulate the proliferation differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       257
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    61 RTASVIIALTDGELHEDLFFYSEREANRSRDLGAIVYCVGVKDFNETQLARIADSKDHVF 120

AAB18458-60 represent murine TANGO 216 proteins. The specification also describes TANGO 264, TANGO 262, and TANGO 267. The TANGO CG describes TANGO 266, TANGO 267, TANGO 267, TANGO 267. The TANGO CC describes TANGO 266, TANGO 267, TANGO 267. The TANGO CC polypeptides can be used to modulate cellular adhesion. The cellular differentiation and/or music cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, requilate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, condulate the proliferation will ferentiation, and/or function of cells and hematopoietic associated diseases and disorders, atelectasis, can hematopoietic associated diseases and disorders, spleen associated diseases, modulate renal disorders, integrinal disorders, spleen associated disease, modulate renal disorders, treat cardiovascular disorders such associated diseases, modulate renal disorders, treat cardiovascular disorders associated disease, or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral oedema, hydrocephalus, brain herniations, lattogenic disease, inflammations, corpusamosis, parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders. They was concerted using information provided.

C created using information provided.
                                                                                                                                                                                               rango 266; TANGO 216;; TANGO 261; TANGO 262; TANGO 267; cellular proliferation; cellular differentiation; cellular adhesion; von Willebrand factor-associated disorder; cell trafficking; cancer; hematopoletic associated disease; atelectasis; pulmonary congestion; oedems; emphysema; chronic bronchitis; bronchial asthma; bronchiectasis; intestinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; brain herniation; iatrogenic disease; inflammation; menhigitis; Alzhenner's Disease; cerebral toxoplasmosis; Parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel human and murine secreted proteins designated TANGO 216, 261, 262, 266 and 267 useful as modulating agents of cellular processes,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sharp JD, Fraser CC;

The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions,

AAB18458-60 represent murine TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO CO OC describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO CO OLYPEPtides can be used to omodulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, and cell trafficking and/or migration, modulate cellular interactions, compulate the proliferation differentiation, and/or function of cells can hematopoiette associated diseases and disorders, atelectasis, blood and hematopoiette associated diseases and disorders, spleen associated diseases, modulate trenal disorders, spleen associated diseases, modulate the proliferation, differentiation, as ischemic heart disease, modulate the proliferation, differentiation, as ischemic heart diseases or disorder. They may also be used to treat disorders associated with the ovaries, and crebral one and/or cartilage associated with the ovaries, and crebral one and/or treat disorders associated with the ovaries, and crebral one companion, bacterial and viral meningitis, Albahaer's Disease, cerebral cancers, hydrocephalus, brain henniations, is atrogenic disease, inflammations, hydrocephalus, brain modulate, multiple sclerosis, brain cancers, hydrocephalus, and ercephalus, and treat hepatic disorders, it was not encephalus, and treat hepatic disorders, created using information provided.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61 RTASVIIALTDGELHEDLFFYSEREANRSRDLGAIVYCVGVKDFNETQLARIADSKDHVF 120

Nucleic acids encoding TANGO polypeptides are useful as modulating agents for regulating cellular processes like asthma, graft versus-host diseases, rheumatoid arthritis, psoriasis, inflammatory bowel disease, septic shock, ulcerative colitis, Crohn's disease, chronic myelogenous leukemia, cancer, liver disease, Hodgkin's disease, osteoarthritis, Lyme's disease, cachexia and autoimmune diseases e.g. mysthemia gravis, autoimmune diabetes and systemic lupus erythematosus. The nucleic acids are also useful for producing transgenic animals and the TANGO polypeptides themselves. Partial cansoric biology, for diagnostic assays, prognostic assays, forensic biology, for diagnostic assays, prognostic assays, paramacogenomics and for monitoring clinical trials. TANGO polypeptides are suitable for both prophylactic and therapeutic methods for treating a subject at risk of a disorder or having a disorder associated with aberrant TANGO expression. A wide range of cellular disorders can be treated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel nucleic acid sequences encoding TANGO-128, 140, 197, 212, 213, 224 and 239 polypeptides useful for the treatment of asthma, rheumatoid arthritis, psoriasis and autoimmune diseases
graft versus-host diseases; rheumatoid arthritis; psoriasis; inflammatory bowel disease; septic shock; ulcerative colitis; Crohn's disease; chronic myelogenous leukemia; cancer; liver disease; Hodgkin's disease; osteoarthritis; Lyme's disease; cachexia; autoimmune disease; myasthemia gravis; autoimmune disease; systemic lupus erythematosus; transgenic animal; diagnosis; prophylatic; therapeutic; mouse.
